

CoCanDa Phishing Email Investigation Procedure Report Summary

Investigation Summary

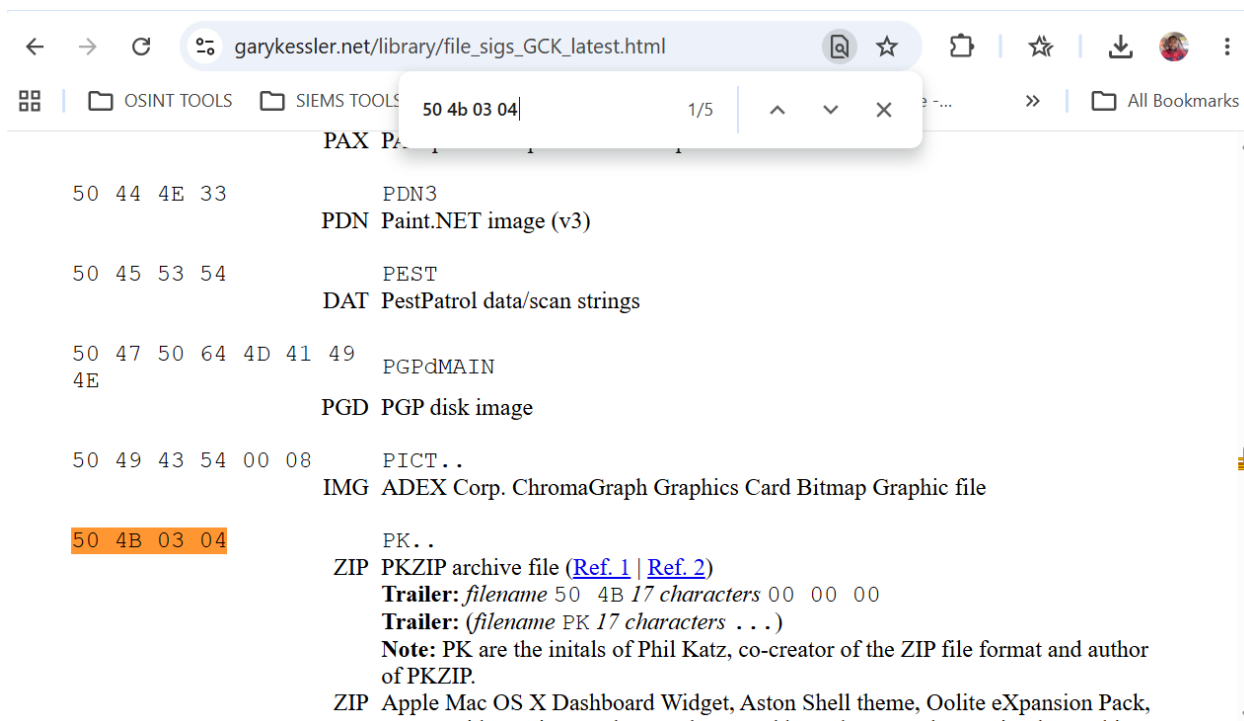

On **26 January 2021 at 01:41:18 EST**, a phishing email was delivered to **themajoronearth@gmail.com** from the spoofed sender **billjobs@microapple.com**. The email failed **SPF (Sender Policy Framework)** authentication, indicating that the sending server was not authorized to send email on behalf of the claimed domain. The message originated from **93.99.104.210 (emkei.cz)**, a publicly available email spoofing service commonly abused by threat actors.

The email attempted to socially engineer the recipient into opening a suspicious attachment named **PuzzleToCoCanDa.pdf**. Based on the available evidence, there is no indication that the attachment was opened or that malicious code was executed on the endpoint.

CyberChef's "From Hex" operation was used to analyze the attachment's file signature (magic bytes) and determine its actual file format.

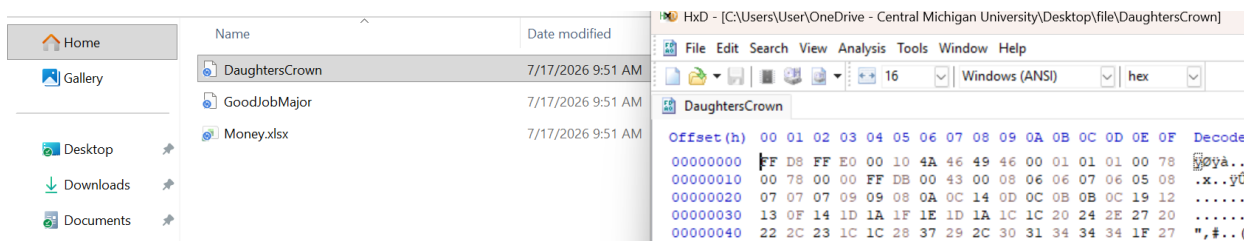

The Gary Kessler File Signature Database was used to verify the attachment's true file type. Although the attachment was presented as a PDF, its file signature identified it as a ZIP archive, indicating that the file extension had been intentionally disguised.

The attachment was renamed with a .zip extension based on the file signature analysis, allowing the archive contents to be safely examined.

The extracted contents of the ZIP archive were analyzed to identify embedded files and determine whether additional malicious payloads were present.

HxD Hex Editor was used to inspect the file signature of the "DaughtersCrown" file to determine its true file type and verify whether it matched its extension.

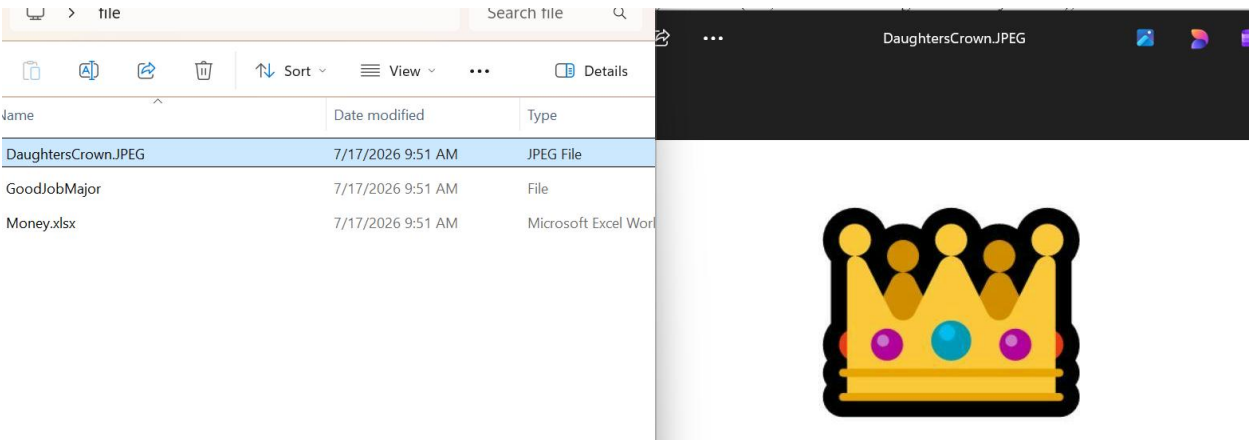

Segment Tags of the form 0x-FF-Ex (where x = 0..F) are referred to as APP0-APP15, and contain application-specific information. The most commonly seen APP segments at the beginning of a JPEG file are APP0 and APP1 although others are also seen. Some additional tags are shown below:

- 0xFF-D8-FF-E0 — [Standard JPEG/JFIF file](#), as shown below.
- 0xFF-D8-FF-E1 — Standard JPEG file with Exif metadata, as shown below.
- 0xFF-D8-FF-E2 — Canon Camera Image File Format (CIFF) JPEG file (formerly used by some EOS and Powershot cameras).
- 0xFF-D8-FF-E8 — [Still Picture Interchange File Format \(SPIFF\)](#), as shown below.

FF D8 FF E0 xx xx 4A 46 ÿøÿà...JF
49 46 00 IF.

JFIF, JPE, JPEG, JPG [JPEG/JFIF graphics file](#)
Trailer: FF D9 (ÿü)

File signature analysis confirmed that the "DaughtersCrown" file is a JPEG image.

The file was renamed with the appropriate .jpg extension and successfully opened, confirming that it was a legitimate JPEG image.

File Explorer view showing files: DaughtersCrown.JPEG, GoodJobMajor, Money.xlsx.

Hex editor view showing file signature analysis for 'DaughtersCrown' and 'GoodJobMajor'.

DOCX, PPTX, XLSX

Microsoft Office Open XML Format (OOXML) Document

NOTE: There is no subheader for MS OOXML files as there is with DOC, PPT, and XLS files. To better understand the format of these files, rename any OOXML file to have a .ZIP extension and then unzip the file; look at the resultant file named [Content_Types.xml] to see the content types. In particular, look for the <Override PartName= tag, where you will find word, ppt, or xl, respectively.

The "Money.xlsx" file underwent file signature analysis to verify that its actual format matches its file extension and to identify any hidden or embedded content.
